FINANCIAL RATIO ANALYSIS

Financial ratios are simple to compute and easy to understand. They are the most commonly used tools by everyone in finance and accounts. You can easily compare companies of different industries to measure their strength and weakness.

EFFICIENCY RATIOS

Efficiency ratios are key indicators of business performance and financial health of your company. By analyzing these ratios, we help you understand how you manage resources efficiently, generate income and control costs. Our experts analyze in detail ratios such as inventory turnover ratio, accounts receivable turnover ratio and other key indicators to provide you with insight into the operational efficiency of your business.

With our help, ensure that your business decisions are based on accurate financial data and ratios that reflect the true picture of your business.

PROFITABILITY RATIOS

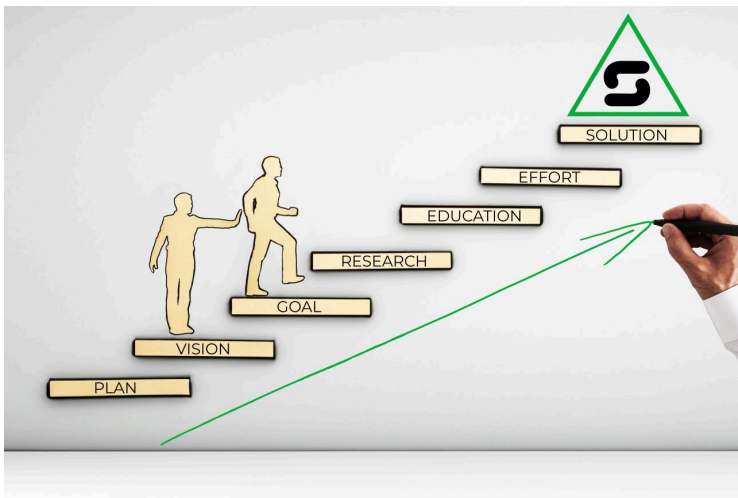

Profitability ratios allow you to track how successfully your business is generating profits in relation to revenues, costs and resources. These ratios, such as net margin, gross margin, and return on equity, provide insight into the financial strength of your business. Our team analyzes key profitability indicators to help you identify areas for improvement and make better business decisions.

SOLVENCY RATIOS

Solvency ratios measure your company's ability to meet its financial obligations in the long term. Key indicators, such as the debt-to-equity ratio and the interest coverage ratio, provide insight into the stability and security of your business. Our team carefully analyzes these ratios to help you maintain a balance between debt and equity and ensure the financial viability of your company.

With our expert analyzes of solvency ratios, make smart financial decisions that protect the future of your business.

WE HAVE NUMBERS IN OUR FINGER TIPS

OUR TEAM

Our team consists of experienced and creative professionals who are dedicated to creating innovative and functional solutions for your projects. Whether it is architectural design, technical documentation or consulting, our team uses the latest technologies and tools to ensure the highest quality and efficiency of each project.

With an emphasis on detail, professionalism and close cooperation with clients, our team will give shape to your ideas and turn them into reality.

CAPITAL BUDGETING TECHNIQUES

Capital budgeting techniques are key to making the right investment decisions that affect the long-term growth and success of your business. Using methods such as net present value (NPV), internal rate of return (IRR) and return on investment (ROI), our team analyzes the profitability and risk of investments to help you optimize your financial resources.

With our expertise in capital budgeting, we bring data and analysis that enable strategic decisions aimed at maximizing returns and minimizing risk.

ACCOUNTING RATE OF RETURN METHOD

The accounting rate of return (ARR) method is a simple technique for estimating the profitability of an investment by measuring the average annual return relative to the initial investment. ARR provides a quick insight into the potential return on investment, helping you make decisions about the projects that bring the most value to your business.

Our team uses ARR as part of a broader capital budgeting analysis to enable you to make informed decisions about future investments.

PAYBACK PERIOD AND ACCOUNTING METHOD

The payback period measures how long it takes to recoup the initial investment through generated cash flows, making it a simple and quick tool for assessing investment risk. The calculation method, on the other hand, analyzes the average annual profit to determine the profitability of the project.

These methods enable a quick assessment of the viability and safety of investments and are crucial in making investment decisions that reduce risk and optimize the resources of your business.
